

# Pathfinder Solutions Systems Modeling Mentoring Services

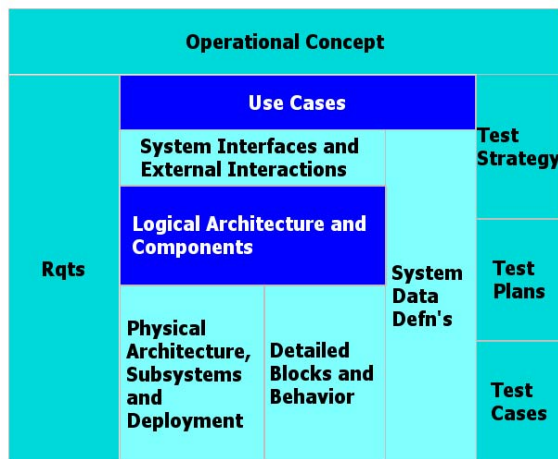

*Industry-renowned and field-proven Systems Modeling expertise transfer*

Building complex, high performance systems is more than just difficult – it requires vision, focus and diligence. So you've turned to model-driven systems engineering technologies to help. A good step - but that itself is no guarantee of success.

The Complex Systems landscape is littered with failures – promising projects that started off with the best of intentions, only to be overwhelmed by unanticipated pitfalls, technology limitations, even human nature. Optimistic enthusiasm and the newest tool are no substitute for *hard-earned experience* on real-world projects. You want someone who has been there and done that to let you in on what it really takes to make it all work.

Who do you turn to? Someone who has the chops - a solid record of success. Someone with experience building the kind of systems you build. Someone who knows how to get your team on track fast, and then help keep them running true. Most of all, you want someone with a passion for this stuff.

## ***Pathfinder Solutions.***

*Our Expert Systems Modeling Mentoring will help your team architect and , specify your high-performance system quickly, with quantum gains in productivity and quality.*

### **DEEP EXPERIENCE**

Our staff members have architected and specified dozens of systems with customer teams, and then gone on and solved the myriad of problems on the way to their successful deployments. Our successes improve lives daily - they take you to work, save lives, defend our country, carry your phone calls and a lot more. We are right there with our customers, feeling the satisfying ache of good, hard work. As you start your journey, bring us along for what our earlier customers have taught us.

### **PROVEN TECHNIQUES**

Install the latest tool, stand back and watch success roll in - right? Not quite. Getting the most from Systems Modeling technology requires a shift from document-focused paradigms to a model-driven approach that simplifies the systems, boosts quality and delivers quantum business gains. Build consistent results with proven techniques like Logical Architecture, Aspect Orientation, "One Fact in One Place", flexible redeployment, Minimalist Modeling, and simulation from executable models. Take full advantage of process automation and governance technology to maximize productivity and system quality, and discover how the "right way" to build you system is now also the fastest way.

### **SINGULAR FOCUS**

Our team has been focused on engineering complex systems with model-based approaches and technologies since the 80's. We formed Pathfinder Solutions with the singular focus of delivering game-changing business results with a proven model driven approach. It's all we do - we have a passion for this stuff.

*"They have 'been there and done that', and the expertise and enthusiasm they bring have boosted our team to really pick it up a notch. I can't even count all the ways they have helped us succeed."*

*Bill W., Architecture Lead  
Abbott Laboratories*

*Take us with you. Generate Results.*
